

UBY Productivity

OPTIMISING CONSTRUCTION SITE PRODUCTIVITY

Geolocate and track the status of equipment and vehicles to monitor activity, optimise site operations and manage costs.

Locate vehicles by zone – depot, loading area etc

Real time location and movement direction for tagged, mobile assets

Track everything, indoors and out

Assess productivity by tagged item, checking loading / unloading time, speed, and circuits completed per day

Check fleet information (regulatory deadlines, compliance, idling / running etc)

SOLUTION UBY PRODUCTIVITY

Our cloud-based platform holds all information about your equipment and fleet. Track everything from large construction machinery to small tools. All data is centralised and digital. Track everything from anywhere, sharing one robust source of data with other members of your team.

- ▶ Improve how your equipment is managed and used with an online directory of your entire fleet,
- ▶ Optimise onsite productivity by geolocating equipment and vehicles and avoid unnecessary idling time,
- ▶ Leverage actionable information about your equipment, improve its use rate and ensure timely maintenance.

Case study

Viaduct Project LRT1 – Manila

With precast bridge spans continuously brought in by transporter, smooth logistics was key. Transporters and a mobile gantry crane were tracked in real time, allowing managers to assess status (moving / stationary) at any time, and see reports of journeys taken, departure and arrival times etc., improving project efficiency.

Value: €4K
Project duration: 7 months
