U⊳Y Asset

INFRASTRUCTURE ASSETS MANAGEMENT SOLUTION

A simple and flexible cloud solution for infrastructure asset managers to optimise the planning, control, and interventions on the structures they oversee.

UBY Asset enables our clients to **visualise and manage** their portfolio of assets, thanks to a detailed digital overview that is stored in the cloud.

An adaptive pricing structure that reflects a manager's requirements and budget.
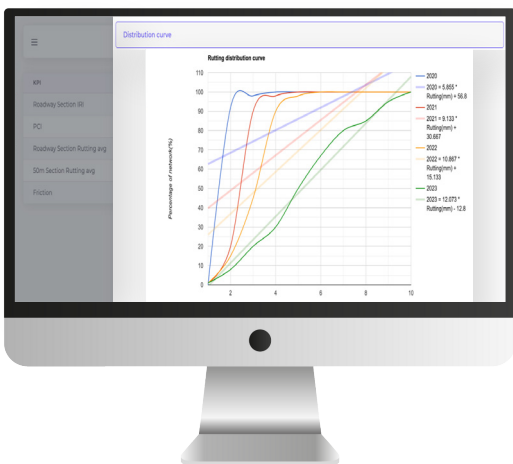

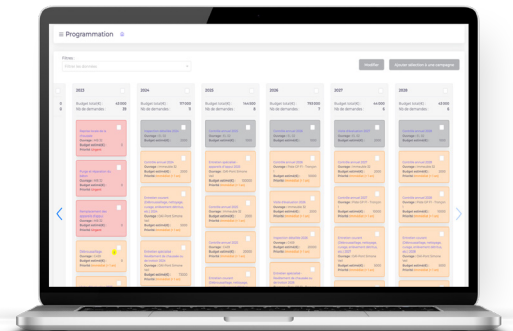

**Anticipate maintenance interventions, fully optimise your resources, and reduce assessment times.**

Simplify and ensure reliability of data processing and exporting for your reports and summaries.

THE **UBY ASSET** SOLUTION

▶ Intuitive and map based design allowing geographic and multi-criteria search of structures.

▶ 1-click access to the details of any asset, its historical survey, monitoring and / or investigation details, and any planned future works.

▶ A multi-year programming tool allowing to manage forecasted operational needs and requests for additional works that may need to be carried out.

▶ A planning tool allowing for the visualisation of operations over time and tracking their progress.

▶ Digitisation of each type of operation with simple on-site input tools and automatic report generation.

▶ Real-time tracking and analysis of budgets.

▶ Graphic representation of structural deterioration, ageing projection, and automatic scheduling of renovation needs based on defined thresholds.

▶ Access to on-site inspection tools, available offline if needed, accessible on any iOS and Android tablet.

Case study

Solution actively deployed on Paris Airport's structural assets.
